

Web Page Authoring Project

Stewarts Real Estate

Stewarts Real Estate is a real estate company that sells and auctions properties, and manages rental properties. It is one of the largest managers of rental properties in Ballarat. They have striven to develop and maintain a high regard by the community for professionalism as agents for people selling properties and with people purchasing those properties.

The business employs 6 people, George Stewart, the Owner/Manager who oversees operations, an accountant who keeps a track of all property sales, a receptionist and 3 real estate agents (Helen Lock, Robert Grills, and Graeme Vickery).

In the last few years' property sales in the Ballarat area have been steadily falling and George is convinced that steps need to be made to improve the way in which properties are advertised, particularly to people living outside the Ballarat area. He believes that this would increase his potential market.

George has decided that a web page is one way to advertise properties to people living outside the Ballarat area and you have been employed to produce the site for him. This web page will require a page to describe the company and pages showing the current properties, new releases, and a page to allow clients to submit a form to arrange an inspection of the property.

The data that needs to be included is provided below and on the following pages. Your teacher may provide this document to you so that the text can be copied and pasted onto your web pages. You will need to create or find images for the site.
