

Modifying Images

Photoshop allows you to make extensive changes to images. In this chapter we will look at a few examples including distorting photos and applying filters and effects.

Selecting the Correct Layer

Each time you pasted an object into the Pets background the new object was placed in a separate layer. So the background is in one layer, the cat in another layer and the dog in a third layer. To edit an object you must select the layer that it is in.

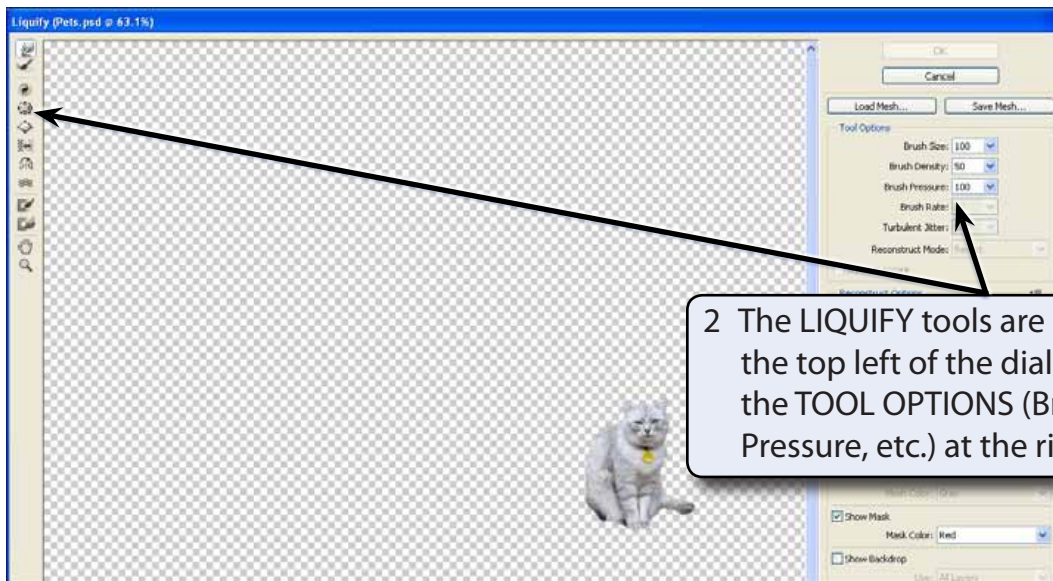

- 1 Load Photoshop and open your PETS file.
- 2 When you wish to edit part of a picture you select the appropriate layer.

The Liquify Filter

The LIQUIFY filter allows you to modify the appearance of an image in a layer.

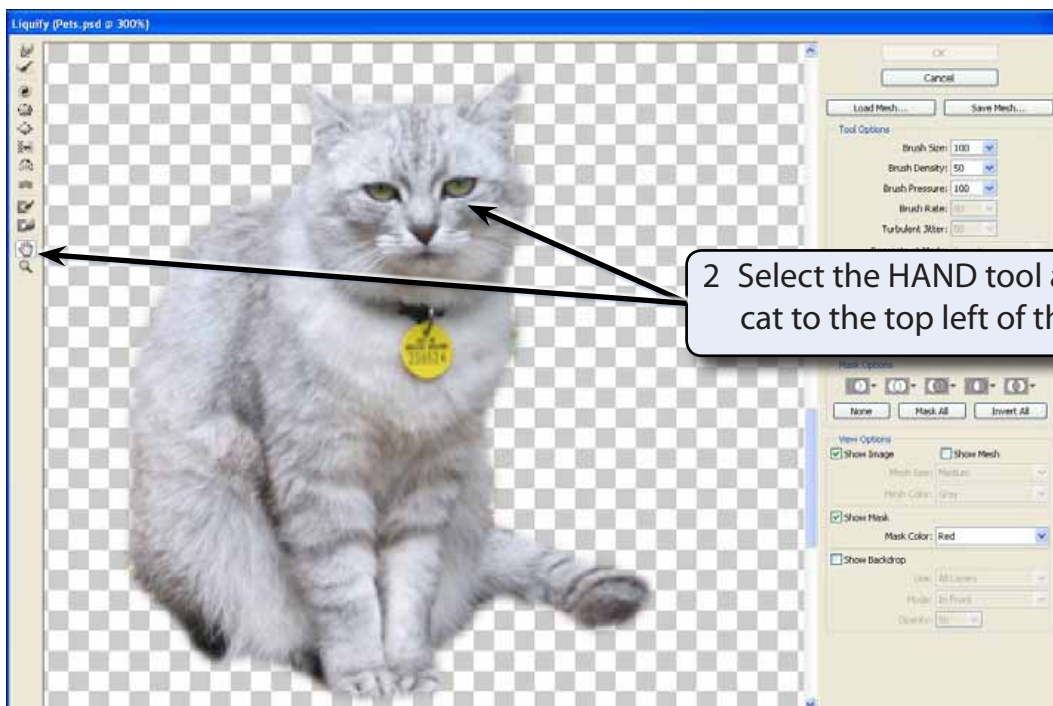

- 1 Display the FILTER menu and select LIQUIFY. The cat should be displayed in the LIQUIFY dialogue box.

A The Hand Tool

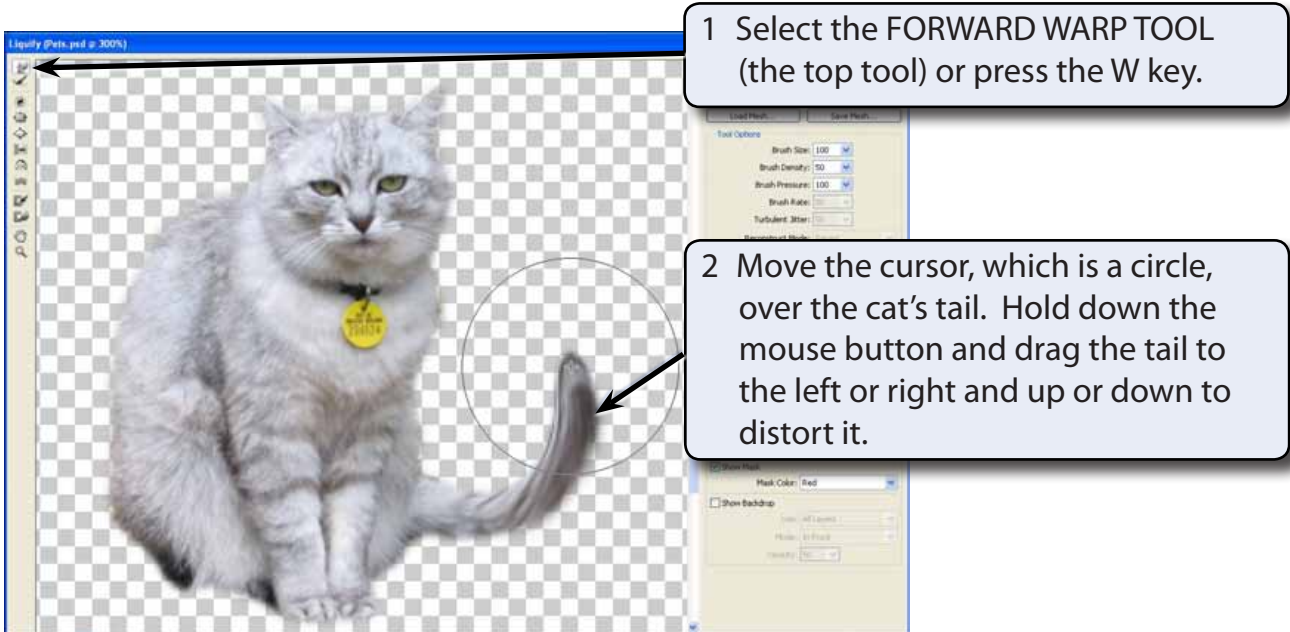

The HAND TOOL allows you to drag the image around the view area.

- 1 Press CTRL+ a few times on the Windows system or COMMAND+ a few times on the Macintosh system to zoom in on the cat.

B The Forward Warp Tool

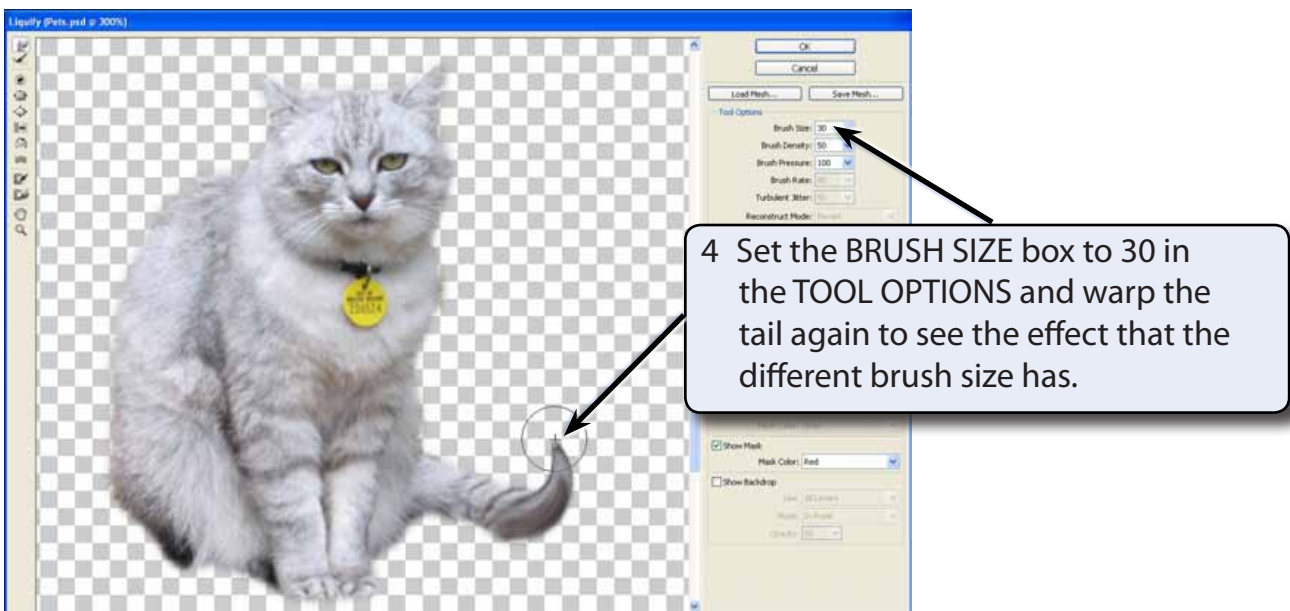

The FORWARD WARP TOOL pushes pixels (screen units) forward as you drag the mouse.

1 Select the FORWARD WARP TOOL (the top tool) or press the W key.

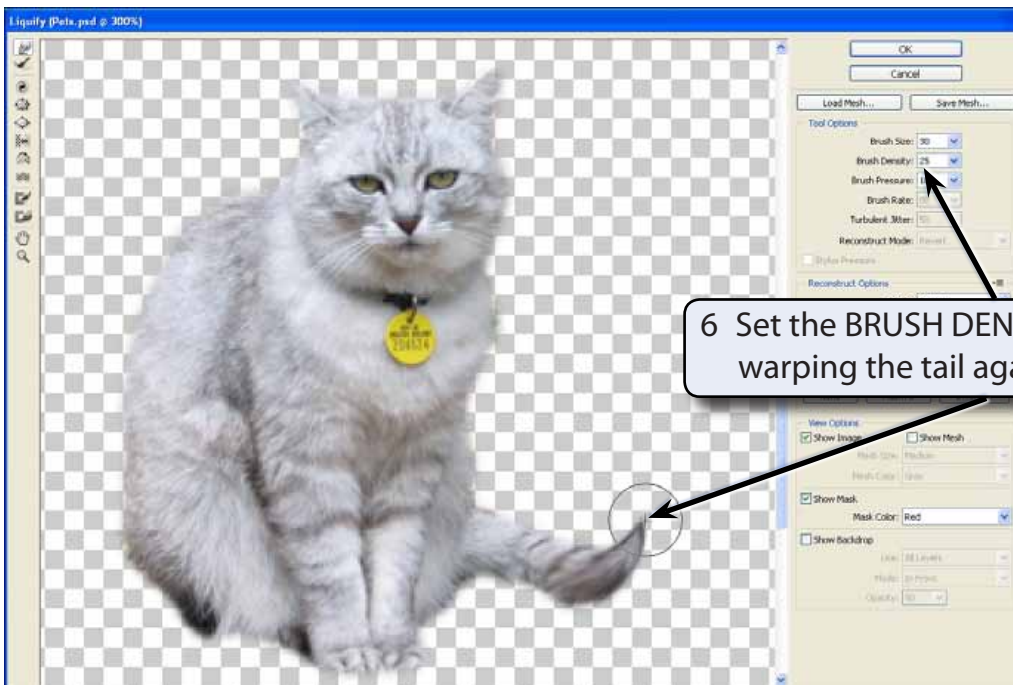

2 Move the cursor, which is a circle, over the cat's tail. Hold down the mouse button and drag the tail to the left or right and up or down to distort it.

3 Click on the RESTORE ALL button in the options at the right of the dialogue box and the image will be returned to its original state (you can also press CTRL+Z or COMMAND+Z to UNDO the last step of the effect).

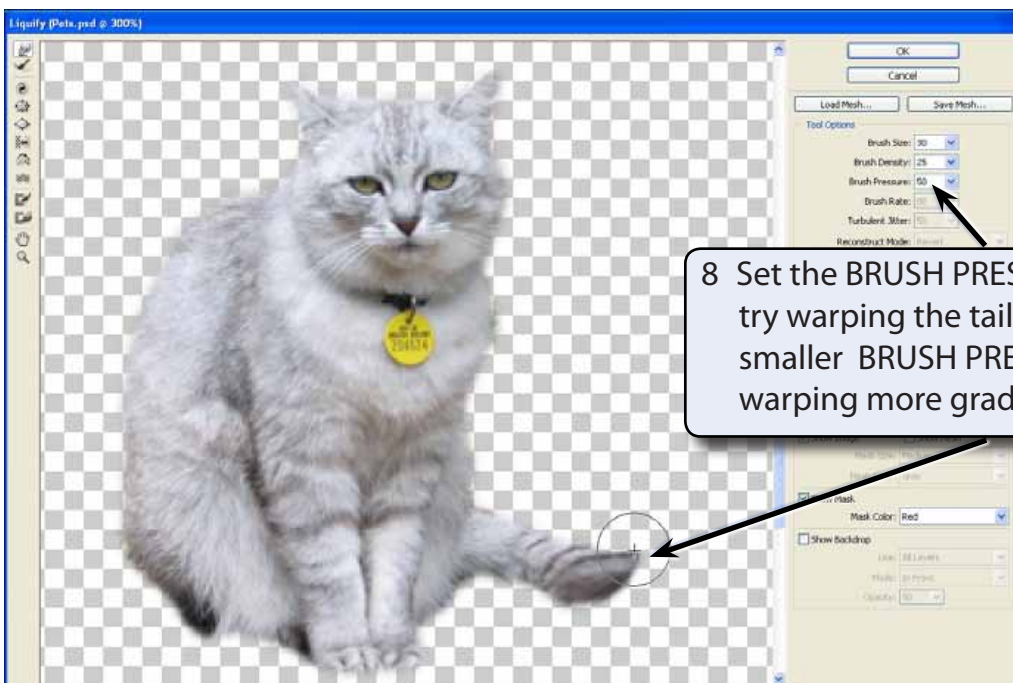

4 Set the BRUSH SIZE box to 30 in the TOOL OPTIONS and warp the tail again to see the effect that the different brush size has.

5 Click on the RESTORE ALL button at the right of the dialogue box or press CTRL+Z or COMMAND+Z to UNDO the effect.

7 Click on the RESTORE ALL button to UNDO the effect.

9 Click on the RESTORE ALL button to UNDO the effect.
