

Selecting Parts of Images

An important feature of any graphics program is its ability to select parts of images. This might include separating an image from its background or removing a background. In this chapter you will learn how to select parts of images using a variety of different tools.

Loading a Sample Image

A sample photo will be opened and some editing carried out on it.

- 1 Load Photoshop or close the current file.
- 2 Click on the OPEN button in the WELCOME screen or display the FILE menu and select OPEN.
- 3 Access the PS SUPPORT FILES folder.

- 6 Press **CTRL+0** or **COMMAND+0** to set the zoom to FIT ON SCREEN so that the image fills the screen.

The Editing Tools

Photoshop offers numerous ways of selecting parts of an image. Some of them are the basic, such as the EDIT MARQUEE TOOL and the LASSO TOOL, however, some are much more powerful, such as the OBJECT SELECTION TOOL and the MAGIC WAND TOOL.

The Edit Marquee

There are two main edit marquees, one is rectangular and the other is an oval.

A The Rectangular Marquee Tool

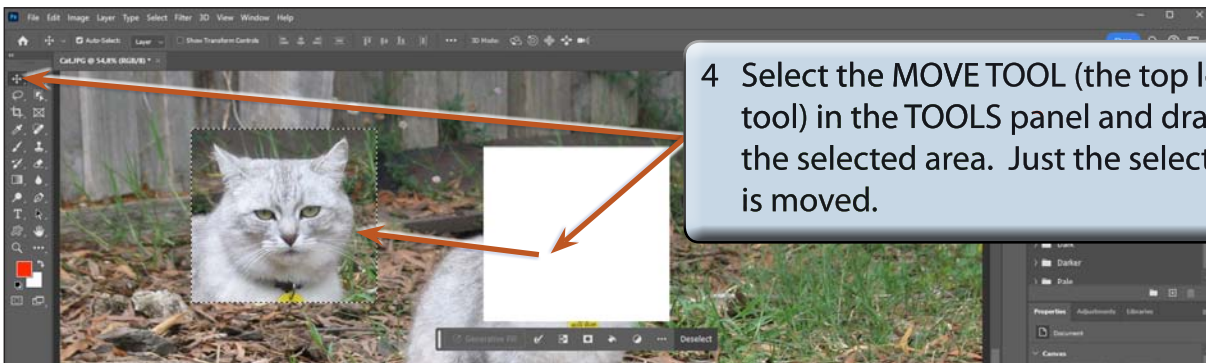

1 Move the pointer over the EDIT MARQUEE TOOL (the top right tool) in the TOOLS panel, hold down the mouse button and the edit marquees should be displayed.

2 Select the RECTANGULAR MARQUEE TOOL.

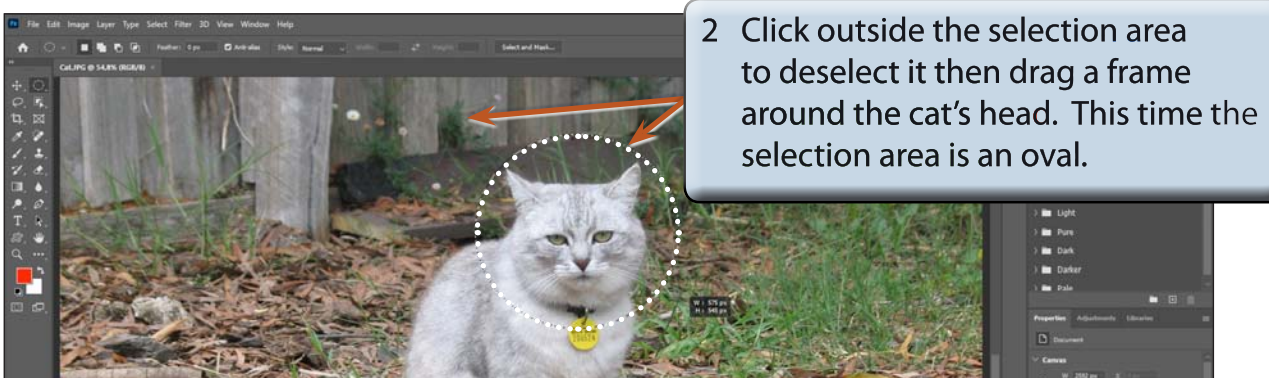

3 Drag a frame around the cat's head.

- NOTE:**
- i A frame of 'marching ants' is added to the screen to highlight the selection. This selected area can be moved, copied, rotated, resized, transformed and adjusted.
 - ii The CONTEXTUAL TASK BAR is added below the selection with some of the functions that can be applied to the selection.

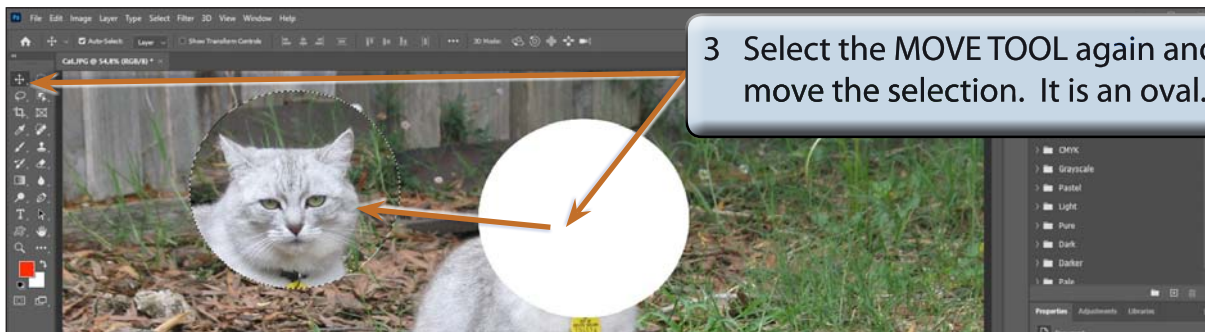

- 5 Press **CTRL+Z** or **COMMAND+Z** (or select UNDO MOVE from the EDIT menu) to return the selected area to its original position.

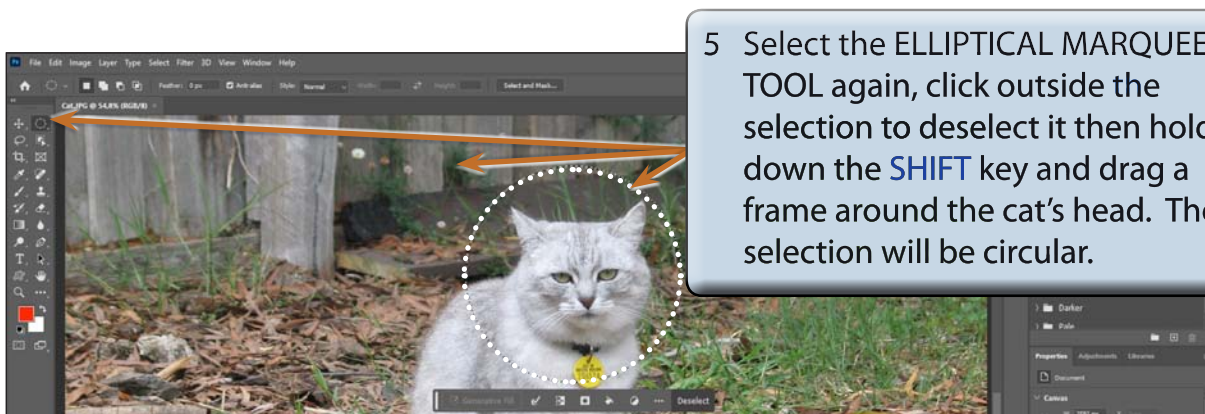

B The Elliptical Marquee Tool

NOTE: When you select a MARQUEE TOOL you can press **SHIFT+M** to toggle between the RECTANGULAR MARQUEE and ELLIPTICAL MARQUEE tools.

4 Press **CTRL+Z** or **COMMAND+Z** to undo the move.

NOTE: The SHIFT causes the ellipse to be a circle. If you hold down the SHIFT key and drag the RECTANGULAR MARQUEE TOOL, a square selection area is drawn.

Deselecting Objects

When you select an area on the screen, that area remains selected until you select another area. The selection needs to be turned off.

Press **CTRL+D** or **COMMAND+D** or click on the DESELECT button in the CONTEXTUAL TASK BAR under the selection and the selection is removed.
