

Absolute Position Elements

Absolute Position Elements (AP Elements for short) are containers that can hold text, graphics or tables. They can be placed anywhere on a page and moved to new positions as required. They are assigned a specific position so that browsers know where to display them. In earlier versions of DreamWeaver, AP Elements were called Layers.

AP Elements are a relatively new web authoring tool and as such can only be viewed in more recent browsers. In this chapter a page that uses AP Elements will be created to advertise special tours offered by the TravelWise company.

Creating the Specials Page

The SPECIALS page will be created entirely with AP Elements.

1 Load DreamWeaver or close the current page. Create a NEW HTML page and set the screen to the DESIGNER workspace.

4 Save the page in your TRAVELWISE folder as:

Specials or Specials.html

Creating a Title Element

The first AP ELEMENT will contain the title of the page.

3 Enter the following text in the AP ELEMENT frame:

Darksman block

the CSS

Edt Rule CSS Panel

ROPERTIES	Ponel See 35 V px V P F000		Address Annu

- NOTE: i You can use the COLOURS section of the ASSETS panel to set the same shade of dark red as the headings in the other pages.
 - ii The AP ELEMENT frame is called a DIV tag (short for a DIVISION tag) which divides a region of the page for content.
