

Adobe Illustrator Project 1

Perspective Drawing Designs

Espresso is a popular coffee shop in the heart of a large city. It specialises in the different types of Latte coffee including cappuccinos, mochas, and cortados. Business has been growing and, to meet the demand, the owners have decided to renovate the front of the shop.

They have commissioned you to provide a perspective drawing of how their shop could look.

Investigating the Task

- 1 Use the internet to look at some possible shop front designs. If you cannot think of a suitable design, use the following as an example.

- 2 Look through the **SYMBOLS LIBRARY** and select symbols that could be used, such as tables and chairs, trees or shrubs, etc.
- 3 Work out what text will be added to the design.

Designing the Solution

- 1 Work out what type of perspective grid that will need to be used and the required orientation of your page.
- 2 Create a **LAYOUT DIAGRAM** for the design showing what the shop front should look like, its entrance position, windows, etc, and where the symbols will be placed.
