

Creating Pamphlets

Pamphlets are an excellent way of displaying publicity information in a concise manner and they can be easily folded and distributed. The most common form of pamphlet is one comprising 6 sides (or columns), 3 on each side of a sheet of paper. The sheet of paper is then folded in three. You can also create 4 sided pamphlets that are folded in half.

The most important step in the creation of this type of document is working out where each side should be placed so that the pamphlet folds correctly. Collect an A4 sheet of paper, turn it on its side (called landscape) and fold it into three even sections. Write the page number on each page so that page 1 is the first page and page 6 the last page. Open the sheet up and you should have:
